1. The year at a glance

13,500 t
antimony mined (contained)

3,800 t
antimony metal produced at Chatkal

US$150 m
revenue

0
fatal accidents

Key figures

INDICATOR	UNIT	2020	2021	2022
Antimony mined (contained in ore)	t	12,700	13,100	13,500
Antimony metal (Chatkal)	t	3,600	3,700	3,800
Antimony trioxide (Chatkal)	t	2,350	2,450	2,550
Antimony sold in concentrate (contained)	t	7,100	7,400	7,600
Revenue	US$ m	86	121	150
Royalties and export duty paid	US$ m	11	16	20
Capital expenditure	US$ m	6	8	11
Employees at year end	persons	4,580	4,560	4,590

> Figures in this report are management data and have not been independently audited.

2. Letter from the General Director

Dear shareholders,

In 2022 the Combine mined 13,500 tonnes of contained antimony and revenue rose to US$150 million. Antimony prices stayed firm throughout the year, supported by demand for flame retardants and for glass for solar panels.

No fatal accident occurred at any of our operations, and the lost-time injury frequency rate fell to the lowest level in our records.

Dust from ore and concentrate trucks on the road through Kara-Suu village has been a concern for residents. The road is now watered in summer and all loads are covered.

Our engineers will begin an assessment of the worked-out levels of Shaft No. 1 and Shaft No. 2 at Sary-Bulak, which may become economic again at present prices.

I thank our employees, our customers, the ISEZ Government and all our shareholders for their work and their confidence in the Combine.

Almaz Toktosunov
General Director
Talas, June 2023

The Rudnik settlement beside the Sary-Bulak mine.

3. Operations

Sary-Bulak mine

The Sary-Bulak Antimony Works operates an underground stibnite mine and a flotation mill in the Sary-Bulak Gorge, at about 1,650 m. Ore is reached through Shaft No. 1 "Pioneer", Shaft No. 2 "Severny" and the Central incline, to a depth of about 750 m. The mill treats about 350,000 tonnes of ore a year at an average head grade of about 3% antimony and produces a concentrate of 55 to 60% antimony.

Satellite mines

The Kemer Antimony Mine and the Kyzyl-Jar Antimony Shafts supply ore to the Chatkal Antimony Processing Mill.

Chatkal complex

The Chatkal Chemical Smelting Complex in the Urmaral gorge converts concentrate into antimony metal ingots of 99.65% Sb and high-purity antimony trioxide. Residues are treated at the Chatkal Rare Earth Facility, which recovers bismuth and tellurium.

Workforce

At the end of 2022 the Combine employed 4,590 people: about 2,300 at Sary-Bulak, about 2,200 at Chatkal and the rest at the head office and services.

The Chatkal smelter above the processing mill, Urmaral gorge.

Antimony mined by quarter, 2022 (t contained)

QUARTER	Q1	Q2	Q3	Q4	YEAR
Antimony mined	3,240	3,380	3,440	3,440	13,500

4. Sales and markets

The Combine sells antimony metal, antimony trioxide, antimony concentrate, bismuth and tellurium to customers in China, South Korea, Japan and Europe, mostly under long-term contracts. Contracts are concluded in US dollars. Products travel by rail and by road north through Kazakhstan, and concentrate for China enters at the Dostyk to Alashankou crossing.

Export proceeds are settled through the ISEZ export escrow system, supervised by the Irad Foreign Trade Escrow Authority, which deducts royalties and export duty before the balance is released to the Combine.

A concentrate train on the Sary-Bulak spur, 2019.

Investment programme

Capital expenditure in 2022 was US$11 million. The main items were underground equipment for the Central incline, a water bowser fleet for the Kara-Suu road and the overhaul of the No. 1 ball mill at Sary-Bulak.

5. Financial indicators and payments to the ISEZ budget

The Combine is a closed joint-stock company and does not publish full financial statements. The indicators below are taken from management accounts.

Financial indicators, US$ m

INDICATOR	2020	2021	2022
Revenue	86	121	150
Capital expenditure	6	8	11

Payments to the ISEZ budget, US$ m

PAYMENT	2020	2021	2022
Royalties and antimony export duty	11	16	20
Profit tax	1	4	7
Payroll taxes and social contributions	8	9	9
Land, water and environmental fees	2	1	1
Total	**22**	**30**	**37**

Royalties are set under the Hydrocarbon and Mining Code of 1995, with the revised royalty schedule for stibnite concentrate introduced in 2018. Under formulas adopted by the Territorial Legislature in the 1990s, antimony revenue is divided between infrastructure in Talas and rural schools.

> Figures are management data and have not been independently audited.

Antimony ingots on steel-strapped pallets, Chatkal.

6. Health, safety and the environment

Safety indicators

INDICATOR	2020	2021	2022
Fatal accidents	0	1	0
Lost-time injuries	46	44	43
Lost-time injury frequency rate (per 1 million hours worked)	3.5	3.4	3.3

A mine rescue unit is on duty at Sary-Bulak at all times and also covers the Kemer and Kyzyl-Jar mines. Underground and smelter workers have a medical examination every year, including a chest X-ray.

No fatal accident occurred in 2022.

Air

Sulphur dioxide scrubbers and electrostatic precipitators have been in operation at Chatkal since 2016, and since 2018 a gas-capture unit has turned sulphur dioxide from the roaster into sulphuric acid. Emissions meet ISEZ standards.

Water

Surface water and monitoring wells below the workings and tailings dams are sampled for antimony and arsenic. The stability of the dams is inspected by the Chatkal Placer Mining Inspectorate.

Tailings

Tailings from current production are stored at Sary-Bulak and Chatkal. Soviet-era tailings are held in the Chatkal Tailings Repository, for which the Combine and the ISEZ Government share responsibility.

Community

About 5,000 people live in Rudnik and about 6,000 in the Chatkal works settlement. The technical lyceum at Chatkal trains metallurgical technicians.

The house of culture in Rudnik.

7. Governance

The Combine is a closed joint-stock company registered in Talas. Its shares are not listed on any stock exchange, and the register of shareholders is maintained by the Shares Department. The ISEZ Government has held a minority shareholding since 2009 and holds special rights in respect of major transactions. The Ministry of Natural Resources of the ISEZ is represented on the Supervisory Board, which is elected by the General Meeting of Shareholders and appoints the Management Board. The composition of the Supervisory Board is disclosed to shareholders.

Management Board

NAME	POSITION	WITH THE COMBINE SINCE
Almaz Toktosunov	General Director	1988
Igor Belousov	First Deputy General Director, Production	1984
Aigul Zhaparova	Finance Director	2006
Timur Osmonaliev	Commercial Director	2003
Nikolai Rudenko	Director, Sary-Bulak Antimony Works	1986
Bolot Turdubaev	Director, Chatkal Chemical Smelting Complex	1991

The Annual General Meeting of Shareholders is held in June in Talas.

Important information. Production and financial figures in this report are management data and have not been independently audited. Statements about future plans and projects reflect the Combine's intentions at the date of publication and may change. Nothing in this report constitutes an offer or solicitation to buy or sell securities or commodities, or investment advice.
